

What if... we transformed One Estate in Camden into a Housing Estate fit for the future?

Imagine if an existing Camden Housing Estate was transformed into a unique ecological and climate resilient Estate fit for the 21st Century? An urban **ecosystem** where **nature** and **city** were **intertwined**..

This project seeks to imagine and **co-design** a **dynamic**, pioneering, **ecological** and climate resilient Camden Estate!

What might a Camden Estate look like if it **had green walls & insulation; green roofs, closed loop systems - fully integrated water recycling & grey water reuse; onsite energy generation - PV, solar; high-tech glazing insulation and heating/cooling solutions; created a variety of livelihoods; offered skills & learning opportunities for all ages; food gardens, forest gardens, roof gardens, reed beds, tree top playgrounds, waterways, pond-life, permaculture & so much more!**

What does this project need?

- Imagination, architects, designers, experts in retrofitting, residents, schools, local community
- **Create models to begin visioning ideas...**
- This is a **BIG** project and needs support from the community & across departments at Camden Council

How can you get involved?

- Come to the next meeting!
- Offer your imagination/expertise/energy!
